

Trivalent & Chrome Free Finishes  
Hours to White Corrosion Comparison

All salt spray testing done in accordance with ASTM-B-117

Salt spray testing provides a controlled corrosive environment and is used to provide relative corrosion resistance comparisons of various finishes. Salt spray testing does not, by itself, provide an accurate prediction of how the finish will actually perform in real world applications. Salt spray testing results should therefore not be used to predict actual finish performance. Testing in the application must be conducted to confirm actual performance. Variability of results can occur when similar parts are tested in different salt spray chambers even though the testing conditions are nominally similar and within the ranges specified for such tests.
